AMIRHOSSEIN GHOLINIA

Python Developer

Professional Summary

Python Developer focused on software development, backend engineering, and building practical software solutions.

I have approximately three years of programming experience, with a strong focus on software development over the past year. I have hands-on experience with Python, Object-Oriented Programming, APIs, databases, Telegram bots, socket programming, and desktop application development.

I emphasize clean code, modular architecture, error handling, logging, testing, and maintainable software design. I also have practical experience developing AI-powered applications and using AI-assisted coding tools.

Technical Skills

Programming & Software Development

- Python
- Object-Oriented Programming (OOP)
- Modular Software Architecture
- TCP Client/Server and Socket Programming
- Desktop Application Development with PySide6

Backend & API Development

- FastAPI
- RESTful API Development
- Pydantic and Data Validation
- Telegram Bot Development

Database Technologies

- MySQL
- PyMySQL
- Database Integration

- Connection Pooling

AI & Intelligent Applications

- Scikit-learn
- Transformers
- Sentence Transformers
- FAISS
- LightFM
- Semantic Search
- Collaborative Filtering
- Recommendation Systems
- LLM-based Applications

Development Tools & Practices

- Git and Version Control
- Unit Testing and Integration Testing
- Debugging
- Logging and Error Handling
- Cline and AI Coding Agents
- Docker (Basic Knowledge)

Featured Project

AFilm Bot — AI-Powered Movie & TV Series Recommendation Bot

Designed and developed a Telegram-based recommendation system that provides personalized movie and TV series suggestions through a combination of AI technologies and recommendation algorithms.

Key Features & Implementation

- Developed an AI Agent architecture using LangGraph and LangChain.
- Integrated Large Language Models (LLMs) with custom tools and application logic.
- Implemented a hybrid recommendation pipeline combining Semantic Search, Collaborative Filtering, and business rules.
- Used Sentence Transformers and FAISS for semantic retrieval.
- Implemented personalized recommendations using LightFM.

- Designed and integrated a MySQL database for managing users, conversations, messages, and interactions.
- Developed conversational features and user interaction management.

Technologies: Python, LangGraph, LangChain, LLM APIs, FAISS, Sentence Transformers, LightFM, MySQL, PyMySQL, Telegram Bot API.

Education

Computer Engineering Student

University of Science and Technology of Babol

Languages

- Persian: Native
- English: Intermediate
